Install directions for datacasting students

01 Your gear
02 Connect and power up
03 Locate signal
04 Place antenna
05 Critical notes

Your gear

EduCast Receiver

Antenna

USB Power Cord & Power Plug

Amplifier

Power Cord

Command Strips
2.1 Twist antenna cable onto DigiCap box

2.2 Connect power cable to antenna cord & outlet plug...

2.3 ...as seen here, fully connected.

2.4 Attach power cable to DigiCap box, plug both into outlet or power strip
Using Wi-Fi, tune to your local channel

3.1 Power Wi-Fi device on

3.2 Ensure Wi-Fi is on, open Networks, connect to EduCast

3.3 Open web browser, enter this address as numbers: **192.168.100.1**
3.4 Click the SIGNAL QUALITY window, then click TUNE button.

Note that your local channel may be different from what appears in these instructions.

3.5 Choose your station’s channel number from the menu, then click Tune button.
Place your antenna on a window that is...

- on the top floor of your home
- close to an electric outlet
- facing towards the public television station tower nearest you
- Best signal looks like this – 4 bars / 100% quality:

If you do not get 4 bars of reception, try moving antenna...
- ...to another window
- ...to a different room
- ...to a wall

Once best reception is located, attach to window or wall with the two Command strips (with parental permission).
As your receiver downloads content and updates, the school bus will move across the screen. Once complete, it will disappear, to show the login screen. When the login screen appears, enter your email or ID to access your assignments. **NOTE:** if your login does not immediately work, your receiver may still be downloading content – leave it plugged in and connected, just give it a few more hours to complete.

**Download Progress**

**DOWNLOADING 499 OF 1739**

[Progress bar showing 28% complete]

**ENTER YOUR STUDENT EMAIL:**

Email Address

[Login button]

**IMPORTANT:** Once you have good reception, leave the receiver powered and connected to the antenna for at least 24 hours to receive both content and software updates.

NEVER unplug the receiver or antenna once you are set up – it works in the background at all times to load your data and keep you current.
Once logged in, you will see your Classes – click on them to see your Lessons

- Keep your antenna and receiver connected and powered at all times to ensure file delivery. This is especially important for weather events. *Your receiver is not something you should “turn off and back on” to reset – leave it plugged in for best results.*

- You may need to try different locations for your antenna before finding the best reception quality.

- Other students can use your EduCast receiver; they can log in on their Chromebook or wi-fi device using their own information.
